

RoseTTa Code

Coding as a Second Language

Coca-Cola Scholars Leadership Summit | September 2018

What is code?

Code is a language;

It's a means of communication
between you and a computer.

In our spoken *language*,
we use *words* with specific meanings,
formed together in *sentences*,
to *communicate* certain ideas.

[illegible]

In the language of **code**,
computers use **keywords** with specific meanings,
formed together in **programs**,
to **execute** certain ideas.

Alrighty then,

Let's get into it!

Let's write a function to:

Share a Coke

What's needed?

Coca Cola Bottles

People

Bottle Opener

shareACoke (

,

,

)

How do we do it?

Open Bottles

Give Bottles to Others

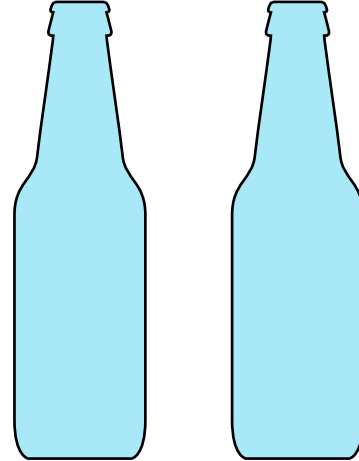

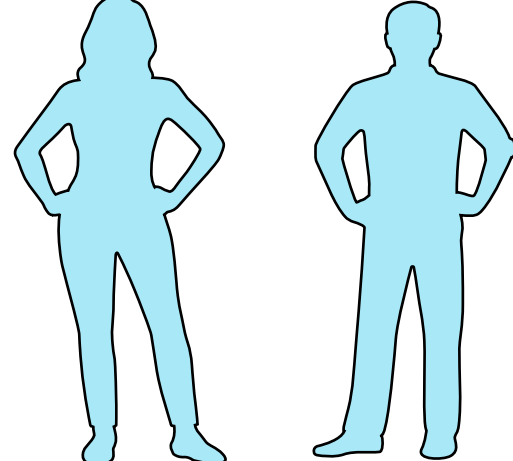

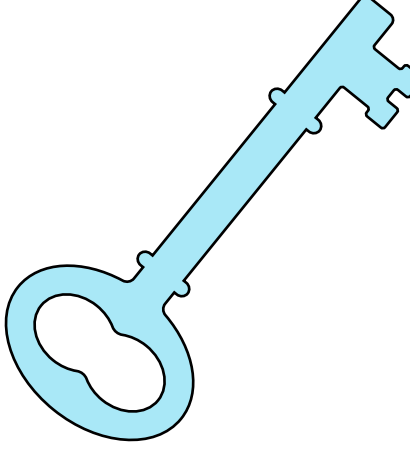

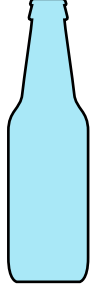

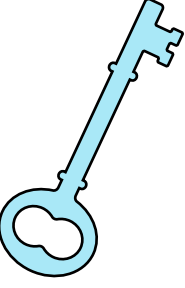

Enjoy!

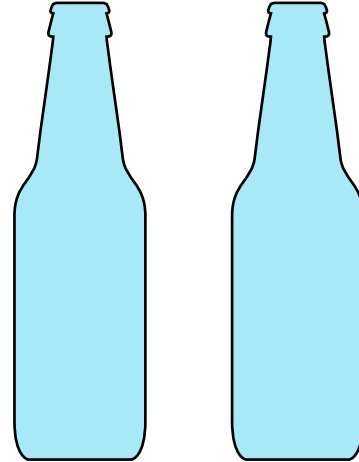

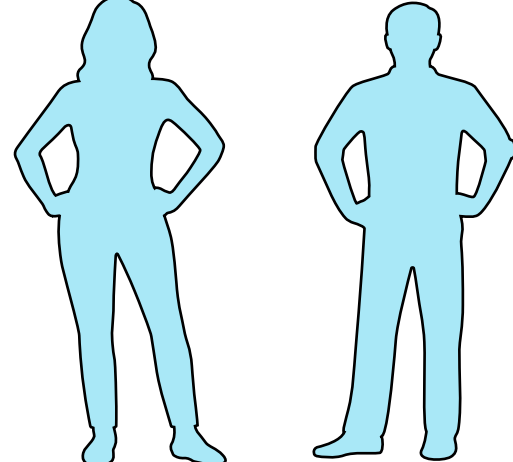

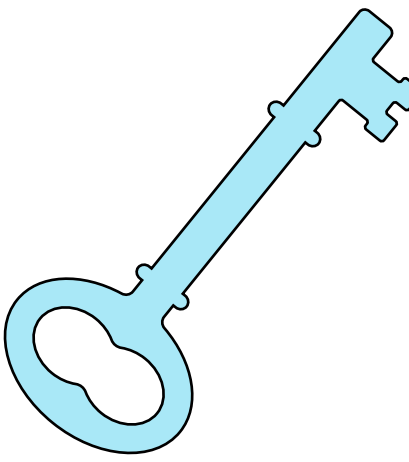

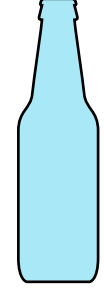

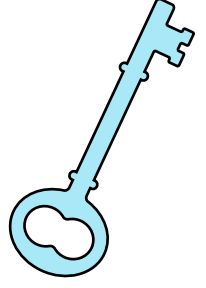

Create A Function

```
def shareACoke( , ,  ) {  
  
    // STEP #1: Open Bottle  
    // STEP #2: Give Bottle to Other Person  
    // STEP #3: Enjoy!  
  
}
```

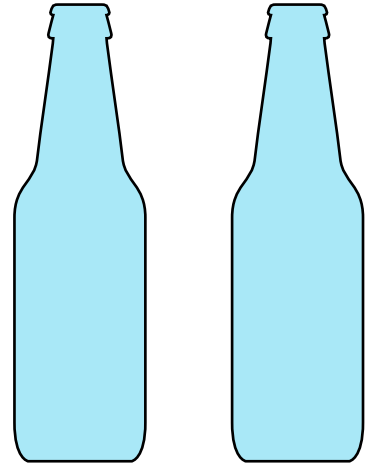

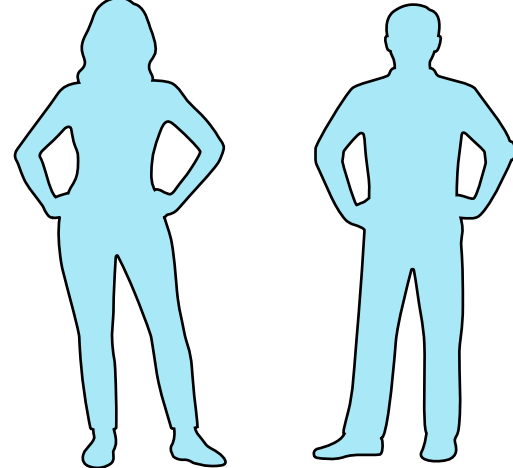

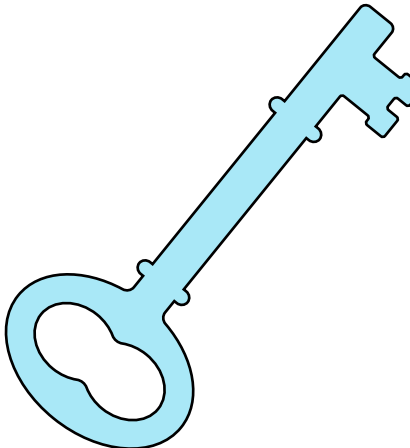

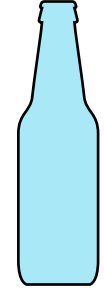

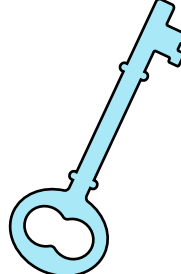

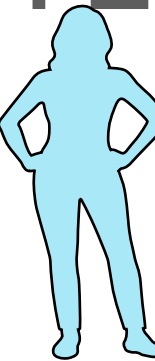

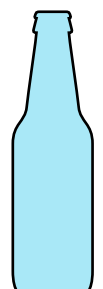

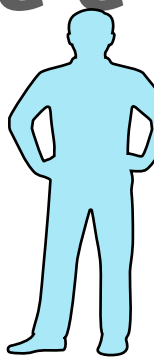

Step #1: Open Bottle

```
def shareACoke( , ,  ) {  
    // STEP #1: Open Bottle  
     .openWith(  );  
  
    // STEP #2: Give Bottle to Other Person  
    // STEP #3: Cheers  
  
}
```

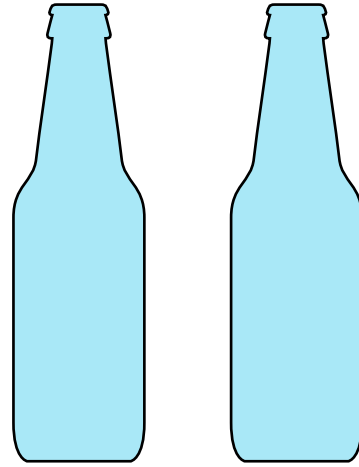

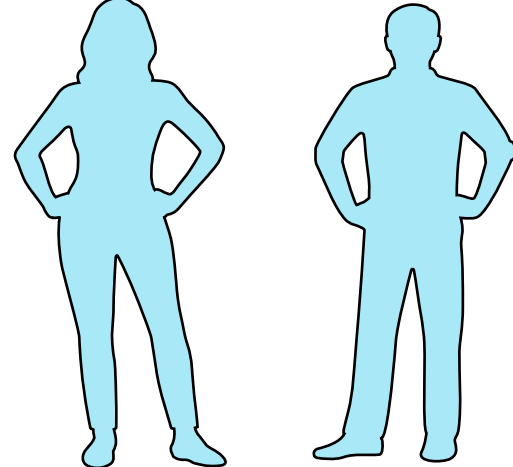

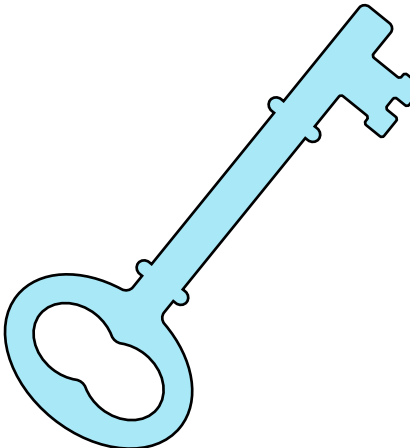

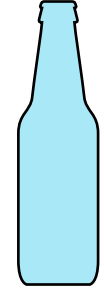

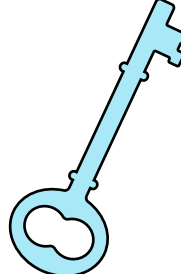

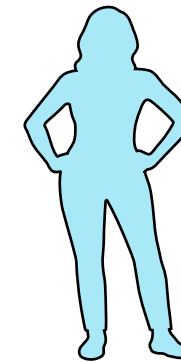

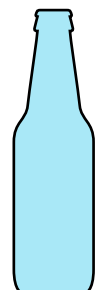

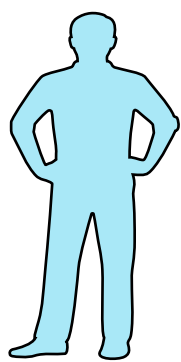

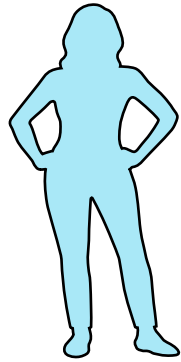

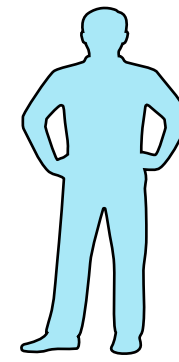

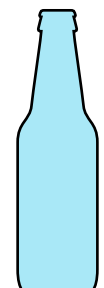

3. Open Bottle

```
def shareACoke( ,  ,  ) {  
    // STEP #1: Open Bottle  
     .openWith( );  
    // STEP #2: Give Bottle to Other Person  
    // STEP #3: Cheers  
  
}  
shareACoke()
```

4. Share bottle with others

```
def shareACoke( , ,  ) {  
  
  // STEP #1: Open Bottle  
   .openWith(  );  
  
  // STEP #2: Give Bottle to Other Person  
   .give(  ).to(  );  
  
  // STEP #3: Cheers  
  
}
```

5. Enjoy

```
def shareACoke( , ,  ) {  
  
  // STEP #1: Open Bottle  
   .openWith(  );  
  
  // STEP #2: Give Bottle to Other Person  
   .give(  ).to(  );  
  
  // STEP #3: Enjoy  
  [ ,  ].drink(  );  
}
```

Thank you!

Legesher

The bridge between
the language we speak and
the code we write.
